

Web Application Quality Assurance (QA) Engineer

My One Medical Source® (MOMS) is web-based platform that connects labs, patients, employers, and clients with the skilled labor for lab test collections. We have built a network of MAPs: Medical Access Points/Providers™ that provide the necessary skilled labor for collecting, processing, and shipping samples to the appropriate laboratories. MOMS facilitates convenient and compliant access to essential clinical testing. Our platform enhances the ability to properly collect samples and ensures they are processed and transported to labs efficiently. Additionally, MOMS supports labs and facilities by providing a reliable network to expand their test offerings and increase growth.

Job Overview:

MOMS is looking for a **Quality Assurance (QA) Engineer** to ensure the reliability, performance, and security of our **web application built with Angular (frontend) and Ruby on Rails (backend)**. The ideal candidate will have experience in both manual and automated testing, along with a strong understanding of web application workflows, databases, and APIs.

Key Responsibilities:

- Develop, execute, and maintain test plans and test cases for Angular and Ruby on Rails applications.
- Perform **manual and automated testing** to identify bugs and performance issues.
- Test **APIs, UI components, and database interactions** for accuracy and efficiency.
- Work closely with developers to **troubleshoot and resolve issues**.
- Conduct **cross-browser and cross-device testing** to ensure a seamless user experience.
- Write and execute **automated test scripts** using tools like RSpec.
- Implement and maintain **CI/CD pipelines** for automated testing using **Semaphore CI**.
- Identify potential security vulnerabilities and report them to the development team.
- Provide detailed documentation of **test cases, defects, and reports**.

Requirements:

- **2+ years of experience** in software testing, preferably with **Angular and Ruby on Rails** applications.
- Strong knowledge of **QA methodologies, tools, and best practices**.
- Experience with **automation frameworks** (RSpec).
- Proficiency in **writing SQL queries** for data validation in PostgreSQL.
- Familiarity with **RESTful APIs and Postman for API testing**.
- Understanding of **CI/DC tools**, specifically **Semaphore CI or similar product**.
- Experience with **performance and security testing** is a plus.
- Strong communication skills and ability to collaborate with cross-functional teams.

Preferred Skills:

- Experience with **Docker** for testing in containerized environments.
- Knowledge of **behavior-driven development (BDD)**.
- Experience with **JIRA, or similar test management tools**.

This is a full-time, on-site role located in Greater Cleveland.
